FP Mailing Solutions Launches **centormail™**

Unique Digital Business Class Mailing System Vertically Weighs and Processes Bulky Mail without Presorting; Offers Shape-Based Pricing (SBP) Compliance

ADDISON, IL. April 12, 2007 — FP Mailing Solutions, a world-class mailroom solutions provider, announced today the introduction of the **centormail™** Series Digital Mailing System, the next generation in digital mailing technology. **centormail™**

offers an array of unique features, including a vertical feeder that processes true mixed mail without presorting, shape-based pricing (SBP) and IBIP compliance, dynamic weighing, an integrated scale, intuitive operating settings,

maximum capacity HP Technology Bulk Inkjet Delivery System™, and automatic secure access to

postage downloads. Business mailers can enhance the flexibility of **centormail™** by adding options, such as automatic feeding, sealing, dynamic weighing, a conveyor stacker, and cost accounting reporting, by adding FP's Mail Center Manager™ (MCM) software package.

“We specifically designed the **centormail™** system to raise mailroom efficiency and accountability when handling all types of mail,” said Michael Dumas, CEO of FP Mailing Solutions. “Because **centormail™** is easy to use, minimizes the amount of sorting customers have to do before feeding pieces through the machine, and processes a variety of oversized mailings, our customers can handle bulky mail exactly the same as regular business-sized envelopes.”

FP Mailing Solutions introduced two models - **centormail™** 120 and **centormail™** 140 - appropriate for mid-range commercial to light industrial business operations. Each system offers a number of features, including:

- **Vertical Transport** – Perfect for catalogs and other bulky mailings, featuring the widest pass-through (nearly 1”) of any mailing system in the industry.
- **Shape-Based Pricing (SBP) Compliance** – Utilizing the recently-approved rate increase and the implementation of SPB, which reflects differences in the costs of handling letters, large envelopes (flats), and parcels, **centormail™** users will be able to automatically calculate rates and process letters and flats to reduce postage costs while increasing productivity.
- **Automatic Postage** – Secure postage refill capability allows users to automatically download postage via the exclusive FP **teleset®** system and a self-dialing internal modem.
- **Automatic Label Dispenser** – Easily print a quick postage label for irregular packages.
- **Envelope Moistener and Power Sealer** – For one-step sealing and processing.
- **Rated Speed** – Users can process up to 140 letters per minute.
- **Whisper Quiet** – Virtually silent, even while operating at high speeds.
- **10 lb. Integrated Scale** – Weighs and calculates the correct postage.
- **SMS Text Messages** – Users can customize and print a short marketing message of up to 5 lines, over 30 characters per line.
- **Dynamic Weighing up to 2 lbs.** – Automatically calculates the weight of mail pieces without a break in the process.
- **External Scale Interface Capability of up to 150 lbs.** – Allows for expanded convenience.
- **Interface to Accounting and Shipping Software** – Unlimited cost accounting reporting capabilities to conveniently manage and evaluate postage used to generate reports through FP’s Mail Center Manager™ (MCM) software package.
- **IBIP (Information Based Indicia Program) Compliant** – **centormail™** comes with full IBIP capabilities to ensure postal security.

“**centormail™**, coupled with FP Mailing Solutions superior customer service, will help mid-sized organizations address any mailroom challenges,” added Doumas.
